

AMENDMENTS TO THE CLAIMS

1. **(CURRENTLY AMENDED)** A body fluid shunt comprising:
 - a. an inlet port;
 - b. an outlet port;
 - c. a fluid passage between the inlet and outlet ports;
 - d. a valve situated between the inlet and outlet ports, the valve defining:
 - (1) an upstream side of the fluid passage between the inlet port and the valve,
and
 - (2) a downstream side of the fluid passage between the valve and the outlet
port,and wherein the valve is at least partially defined by a drain port extending
between the upstream and downstream sides of the fluid passage;
 - e. a piston:
 - (1) having a piston face defined on the upstream side of the fluid passage,
wherein at least a portion of the piston face is defined by a deformable
diaphragm,
 - (2) being **rotationally** displaceable to actuate the valve, and
 - (3) having a cutout defined therein, the cutout being alignable with the drain
port when the piston is displaced,wherein:
 - i. fluid bearing on the piston face at or above a shunting pressure will displace the
piston to actuate the valve, with alignment of the cutout and the drain port
opening the valve to thereby allow passage of fluid between the inlet and outlet
ports, and
 - ii. the position of the piston is independent of the pressure in the downstream side
of the fluid passage.

2. **(CANCELED)**
